PROFILE

With over 7 years' experience in management,Field engineering and 1 year software development, I've been in many challenging situations and have thrived on solving complex problems under pressure.While I love working to solve real-world engineering problems, I've found my passion in the software engineering space and look forward to applying engineering principles to create robust and scalable digital solutions.

- HTML/CSS
- SASS
- MySQL
- Agile
- OOP
- Scrum
- Git
- MVC

INTRESTS

- Creative Coding Sydney
- Play Soccer
- Watch Documentaries
- History

KEY PROJECTS

Weather App
- A ReactJS application that allows users to search for locations, and then retrieve weather information about that location. Use Meta weather API.

Online Engraving
- Developed an interactive website with React, Node, Ruby on Rails & Bootstrap. The app allows a user to choose and design signs.

Babo Resturant
- An online food platform developed with React, Ruby on Rails
- Implemented a complete Rails API with validation and authentication, designed to work well with the front-end.
- Successfully integrated the React front-end with the back-end
- Collaborated in a small dev team of 3 and supported team members through pair programming.

Simple Transfer Market
- An app for soccer managers to add, search, update players and their market value.
- Created and deployed a complete app with a Rails frontend and back-end, with robust validation.
- Delivered a CRUD system with 7 models and
- associations, utilising Ruby on Rails and Bootstrap.

Tic Tac Toe
- Created a tic-tac-toe using HTML/CSS, JavaScript and jQuery.
